It would not be the water pump as in most every engine I've seen there isn't any oil passages going to it, just coolant. As far as water not being in the oil, just remember that oil pressure is usually 20+ psi, while a radiator cap only keeps about 16 psi. If there is a leak, the first direction it's going to go is from the oil into the water.

nissan - Oil in Radiator but not in the oil and no smoke ...
Info. For many car parts, such as engines and cylinder heads, it is important that you specify the correct motor code on your request.The engine code is usually stamped somewhere into the engine block. The first 4 or 5 letters / numbers usually provide enough technical information for a car parts supplier to find the right engine related car part for you.

Nissan Navara Engine codes | ProxyParts.com
The Nissan TD25 is a 2.5 L (2,488 cc, 151.8 cu-in) straight four, water-cooled naturally aspirated diesel engine from Nissan TD family. The engine was manufactured from 1985. The TD25 has a cast-iron cylinder block, a cast-iron cylinder head with OHV (over-head valves) design and two valves per cylinder.
